## **ECOLOGICAL PRODUCTS...**

### **RESPECT TO EVERYONE, EVERYTHING!**

From continents to oceans, lakes to rivers, ground water to atmosphere, microorganisms to human beings and plants, there is a regular relation between all living and non-living things. However, during the last 35 years, the said balance has been disturbed by an increase in the world's population, advances in industry and technology and depletion of natural resources. This has led to environmental issues, and ecological problems have become a vital issue for the future of the world.

#### **A brand new future with ecological products...**

SEREL knows that sustainability of life depends on sustainability of natural resources. With an awareness on environment and future, SEREL has been designing products that foster energy and raw-material saving by decreasing consumption of natural resources to minimum for years.

Especially, the products developed during the last twenty years have been adopted as standard applications shaping new technologies and designs.

Today, with hundreds of sanitary products and seat covers, SEREL offers consumers a wide range of products called ECOLOGICAL products.

With an approach aiming to protect non-renewable natural resources, especially water, ECOLOGICAL products developed by SEREL help the consumers meet with environmental friendly technologies.

Maintaining a high quality for years, SEREL aims at preserving the ecological structure of the world with products respecting nature.

## **ECOLOGICAL PRODUCTS OF SEREL**

### **AT GREEN BUILDINGS HAVING LEED CERTIFICATE**

The rise in the number of environmental friendly green buildings with leed certificate has increased the attention to SEREL's ecological products that are "respectful of nature and humans". SEREL offers unique solutions through its Ceramic Sanitary Wares focusing on maximum water and energy saving, enabling 99% protection against bacteria with smooth surfaces and allowing easier cleaning with less detergent. While preventing unnecessary consumption of resources, ecological products of SEREL lead to major economic advantages both for individuals and the society through significant energy conservation.

With its ECOLOGICAL products, SEREL continues its activities to help projects seeking to gain more LEED points for a certificate.

The SEREL logo is displayed in a white rectangular box with a blue border, featuring the brand name in bold, blue, sans-serif capital letters.

Full  
function  
with 3 litres

3 > 6

LET'S PROTECT our water  
our world

**SEREL has been a pioneer in protecting natural resources through its powerful designs...**

#### **50% water saving at each usage**

Lila Closets produced by SEREL are produced to be used with ceramic cisterns having a 6 litre capacity. However, when the button of the cistern is activated, only 3 litres of water is flushed down while 3 litres is saved. In a house of 4 people, where all are working, a total of 20 flushings are carried out when each family member uses the cistern 5 times in average. Based on this data, the cistern is flushed 600 in a month and 7200 in a year.

Thus, if it is taken into account that a normal cistern consumes 6 litres of water at each flushing, one may easily see that 43200 litre of potable water is sent to sewerage system annually. With SEREL closets, the amount of water saved at wet settings in a single house is 21600 litres which corresponds to the half of the figure stated above.

#### **Full cleaning function with 3 litres of water**

If the closet itself does not allow cleaning with 3 litres of water, namely if 3 litres of water does not lead to the desired cleaning, pressing the cistern's button multiple times and thus releasing 3 litres of clean water to the closet each time becomes a must. Thus, the water is consumed uneconomically.

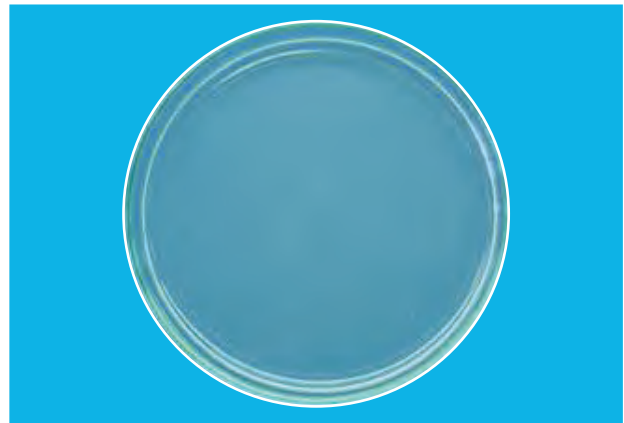

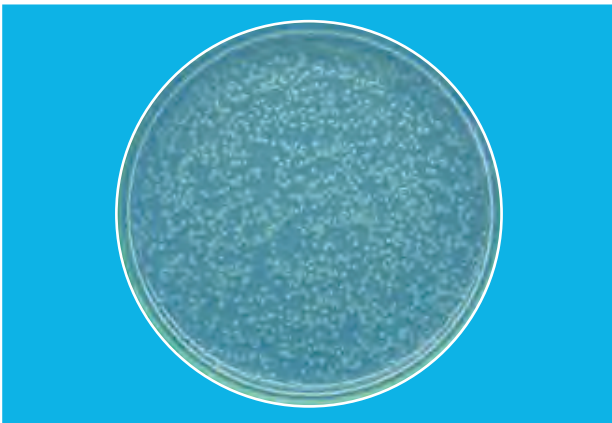

With a special structure created during designing phase, SEREL Lila Closets function fully and perfectly with 3 litres of water both in solid and liquid wastes.

When it is taken into account that "potable water" has been used in closets for years, the question of "how a functional cleaning can be achieved with less water?" is answered through other closets of SEREL too: Amadis, Diagonal, Luna, Star, Daphne and Orkide closets and Sapphire DG12, Smart (SM10-SM12=, Friendly, Basic wall-hung closets of SEREL carry out full cleaning function with only 4 litres of water. Moreover, Serel Diagonal, Orkide, 0139 and 0129 urinals allow full cleaning function with only 1 litre of water.

## EFFICIENT PROTECTION AGAINST BACTERIA WITH THE NANO TECHNOLOGY OF SEREL

99% protection achieved against bacteria with sintering process which has no negative effects on human health can be seen in the below given test. Through nano size silver ions over the fired surface, the product gains an anti-bacterial feature Silver ions penetrating into the surface prevent bacterial growth and provide permanent hygiene in your bathroom.

During the tests carried out by the Research Centre, bacteria were injected over the product and these bacteria were observed to disappear after 24 hours.

### **Serel's technology and hygiene**

Antibacterial sanitary wares having perfect smooth surfaces can be cleaned without requiring any detergents but only water.

### **Contribution to saving**

You no more need expensive cleaning materials for a real hygiene! Serel products achieve maximum benefit with minimum water consumption in cleaning itself and maintain hygiene without consuming your energy and by saving your money.

### **Anti-bacterial and spotless bathrooms**

Having no microscopic pores on their smooth and slimy surfaces, Serel products provide 99% protection against the bacteria in your bathroom.

### **Nature Friendly!**

Serel products cause dispersion of toxic substances to the environment to be minimum as they provide hygiene without using chemical cleaning materials.

**Note:** HYGIENE+ application at our Ceramic Sanitary Ware products range is permanent. We employ hot application method where the HYGIENE+ material is fired to form a second layer of glaze. Thus, the life of the said application is equal to the life of the product itself.

## SEREL ANTI-BACTERIAL SEAT COVERS

A novel anti-bacterial raw material developed by Perstop Chemitec SpSa and called AB-UF prevents the infections caused by bacteria. The said raw material has been tested by the Medical Microbiology Institute of the University of Milan for 7 different bacteria and one fungus and found to be superior.

This raw material used in Gediz and Spil Anti-bacterial Seat Covers of SEREL has been approved not to cause any irritation, dermatologic disease or allergy by ELINCS (European List of Notified Chemical Substances) located in EUROPE.
